

GRANITE FALLS SCHOOL DISTRICT

STUDENT POLICY 5066: MEDICATION AT SCHOOL

Under normal circumstances prescribed and-over-the-counter medication should be dispensed before and/or after school hours under supervision of the parent or guardian. If a student must receive prescribed or over-the-counter oral or topical medication, eye drops or ear drops (“medications”) from an authorized staff member, the parent must submit a written authorization accompanied by a written request from a licensed health professional prescribing within the scope of his or her prescriptive authority. Oral medications are administered by mouth either by swallowing or by inhaling including through a mask that covers the mouth or mouth and nose. If the medication will be administered for more than fifteen consecutive days, the health professional must also provide written, current and unexpired instructions for the administration of the medication.

The superintendent will establish procedures for:

- A. Delegating, training and supervision of staff members in the administration of prescribed or non-prescribed medication to students by a physician or registered nurse;
- B. Designating staff members who may administer prescribed or non-prescribed medication to students;
- C. Obtaining signed and dated parental and health professional request for the dispensing of prescribed or non-prescribed medications, including instructions from health professional if the medication is to be given for more than fifteen days;
- D. Storing prescribed or non-prescribed medication in a locked or limited access facility;
- E. Maintaining records pertaining to the administration of prescribed or non-prescribed medication; and
- F. Permitting, under limited circumstances, students to carry and self-administer medications necessary to their attendance at school.

No medication will be administered by injection except when a student is susceptible to a predetermined, life-endangering situation. In such an instance, the parent will submit a written and signed permission statement. Such an authorization will be supported by signed and dated written orders accompanied by supporting directions from the licensed health professional. A staff member will be trained prior to injecting a medication. Medications other than oral or topical medications, eye drops or ear drops such as nasal inhalers, suppositories or non-emergency injections may not be administered by school staff other than registered nurses or licensed practical nurses.

If the district decides to discontinue administering a student’s medication, the superintendent or designee must provide notice to the student’s parent or guardian orally and in writing prior to the discontinuance. There must be a valid reason for the discontinuance that does not compromise the health of the student or violate legal protections for the disabled.

POLICY 5066 PROCEDURES

Each school principal will authorize two staff members to administer prescribed or over-the-counter oral or topical medication, eye drops or ear drops (“medication”). Oral medications are administered by mouth either by swallowing or by inhaling and may include administration by mask if the mask covers the mouth or mouth and nose. These designated staff members will participate in an in-service training session conducted by a physician or registered nurse prior to the opening of school each year.

Prescribed or over-the-counter medication may be dispensed to students on a scheduled basis upon written authorization from a parent with a written request by a licensed health professional prescribing within the scope of their prescriptive authority. If the medication is to be administered more than fifteen consecutive days the written request must be accompanied by written instructions from a licensed health professional. Requests will be valid for not more than the current school year. The prescribed or over-the-counter medication must be properly labeled and be contained in the original container. The dispenser of prescribed or non-prescribed oral medication will:

- A. Collect the medication directly from the parent (students should not transport medication to school), collect an authorization form properly signed by the parent and by the prescribing licensed health professional and collect instructions from the prescribing licensed health professional if the medication is to be administered for more than fifteen consecutive days;
- B. Store the prescription or non-prescribed medication (not more than a twenty (20) day supply) in a locked, substantially constructed cabinet;
- C. Maintain a daily record which indicates that the prescribed or non-prescribed oral medication was dispensed.
- D. Provide for delegation, training and supervision by a physician or registered nurse.

A copy of this procedure and related policy will be provided to the parent upon request for administration of medication in the schools.

Medications administered, other than orally, topically, or eye or ear drops may only be administered by a registered nurse or licensed practical nurse. No prescribed medication will be administered by injection by staff except when a student is susceptible to a predetermined, life-endangering situation. The parent will submit a written statement which grants a staff member the authority to act according to the specific written orders and supporting directions provided by licensed health professional prescribing within his or her prescriptive authority (e.g., medication administered to counteract a reaction to a bee sting). Such medication will be administered by staff trained by the supervising registered nurse to administer such an injection.

Written orders for emergency medication, signed and dated, from the licensed health professional prescribing within his or her prescriptive authority will:

- A. State that the student suffers from an allergy which may result in an anaphylactic reaction;
- B. Identify the drug, the mode of administration, and the dose. Epinephrine administered by inhalation, rather than injection, may be a treatment option. This

decision must be made by the licensed health professional prescribing within his or her prescriptive authority;

- C. Indicate when the injection will be administered based on anticipated symptoms or time lapse from exposure to the allergen;
- D. Recommend follow-up after administration, which may include care of the stinger, administration of additional medications, transport to hospital; and
- E. Specify how to report to the health professional prescribing within his or her prescriptive authority and any record keeping recommendations.
